

Istation's Indicators of Progress

(ISIP™)

Istation is an integrated learning system that provides assessments in reading, math, Spanish literacy, and Rapid Automatized Naming (RAN). Reports are generated for teachers, parents, administrators, and others that provide detailed information at the student, classroom, school, district, and state level. The reports provide information on the performance level or tier for the student based on their percentile rank, and this information is aggregated up at the various levels of interpretation. Performance information is provided for the overall score as well as individual subtests or domains (e.g., phonological awareness, spelling, reading comprehension, computation and algebraic thinking, etc.).

Students are also routed into the online curriculum after they take the assessment. The system also provides information on student usage within Istation.

The data exchange occurs in a secure environment and provides information from our reports.

Data exchange is made using the EdFi API standards 5.3 and 6.1 by way of

- Utilizing new and existing data descriptors
- Setting up a client with API credentials into our system
- Sending results on a scheduled basis

If changes to mappings are needed, our partners can reach out to us to make the changes in our system that matches their system. We can also work through vendors as-needed.

The future system will add incremental self-service features for maintaining these systems and configurations for each partner on an on-going basis.
